RADIO SPECIFICATIONS

P25 Technology Standards

"Project 25 (P25) is a set of standards produced through the joint efforts of the Association of Public Safety Communications Officials International (APCO), the National Association of State Telecommunications Directors (NASTD), selected Federal Agencies and the National Communications System (NCS), and standardized under the Telecommunications Industry Association (TIA). P25 is an open architecture, user driven suite of system standards that define digital radio communications system architectures capable of serving the needs of Public Safety and Government organizations. The P25 suite of standards involves digital Land Mobile Radio (LMR) services for local, state/provincial and national (federal) Public Safety organizations and agencies. P25 open system standards define the interfaces, operation and capabilities of any P25 compliant radio system. A P25 radio is any radio that conforms to the P25 standard in the way it functions or operates. P25 compliant radio scan communicate in analog mode with legacy radios and in either digital or analog mode with other P25 radios. The P25 standard exists in the public domain, allowing any manufacturer to produce a P25 compatible radio product."

From a local perspective, the SCIP (State Communications Interoperability Plan, State of Hawaii) committee, in their "Strategic Initiatives" released the following (excerpts) in their November 15, 2007 publication:

The HWIN Executive Committee approved the following P-25 technology standards for Hawaii:

All purchases of Land Mobile Radio systems and subscriber voice communications systems and equipment intended for use by public safety or first responders within the State of Hawaii after December 31, 2008 shall be governed by the following requirements:

- i. Communications systems and equipment purchased shall be compliant with the P-25 Phase 1 suite of standards. All subscriber equipment shall at a minimum include a P-25 Phase 1 enhanced full rate vocoder and be fully functional using 12.5 kHz channelization.
